How to enroll Zscaler Private Access for Schaeffler devices (e.g. Laptop)

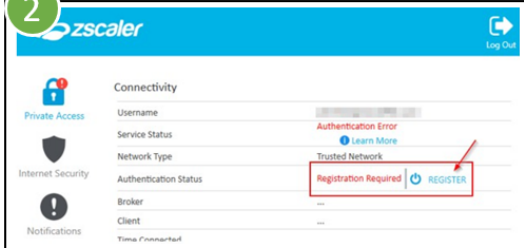

For an enrollment of Zscaler Private Access for Schaeffler devices from a remote location, the following steps need to be followed. A parallel connection using a second VPN solution like Ivanti Secure Access is not required.

1

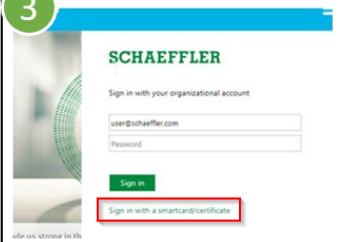

Open the Zscaler Client Connector

2

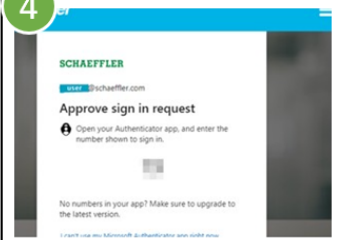

Select „Private Access“ in the menu and click on „REGISTER“

3

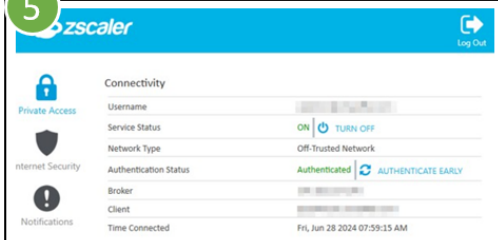

Login with your (virtual) smartcard at the first authenticaion screen. Not with your username and password.

4

Use your Microsoft MFA token at the second authentication screen to complete the authentication. If you have not enrolled a MFA token, you will be prompted for it.

5

Authentication is now completed and a connection to the Schaeffler network is established

6

Every three days you need to reauthenticate at Zscaler Private Access. For this reauthentication you will be prompted only for the Microsoft MFA.

The login using the (virtual) smartcard is only required if you logout completely from Zscaler Client Connector.
